

System Maintenance Guide

Database Operations & Model Retraining Procedures

Author: Shaik Mahammad Shariff

System Maintenance Protocols

- Retraining Model Binaries: Run ``python src/main.py`` locally to ingest new datasets, retrain candidate estimators, and update serialized model pickles.
- Database Backups: Copy the SQLite file ``prediction_history.db`` to a secure backup directory.
- Dependency Upgrades: Re-run environment installations with ``pip install -r requirements.txt`` and lock new packages into ``environment.yml`` and ``requirements.txt``.
