Technical Accomplishments & Impact Metrics

Author: Shaik Mahammad Shariff

Resume Project Description

- Designed and deployed a Flask-based Machine Learning web service running a REST scoring API on Vercel serverless.
- Built preprocessing and engineering pipelines (Mode imputation, 1.5 IQR capping, categorical encoding) and addressed class imbalance using random oversampling.
- Evaluated and compared Logistic Regression, Random Forest, and XGBoost models, selecting Logistic Regression to maximize Recall (66.67%) and limit credit defaults.
- Integrated Local Interpretable Model-agnostic Explanations (LIME) to provide real-time feature attribution scores on the web interface.
- Established automated CI/CD checks via GitHub Actions for testing and lint audits.
