

Define Problem Statement

1. The Business Dilemma

Credit scoring and credit card issuing operations in standard retail banking are slow, labor-intensive, and prone to subjective human biases. Traditional systems lack transparency, failing to explain **why** an applicant was rejected. This 'black-box' nature creates regulatory compliance issues and decreases client trust.

2. Problem Definition Matrix

Parameter	Description
Target Audience	Retail Credit Applicants, Loan Officers, and Risk Admins
Pain Points	Long wait times, subjective scoring bias, opaque decision structures
Operational Goal	Automate predictions under 10ms, provide instant explainable AI factors
Compliance Requirement	Adhere to fair lending standards via transparent risk attribution logs
