

Data Flow Diagram

1. Level 1 Data Flow Diagram (DFD)

Data moves from the user interface, validates through WForms modules, passes to the ML preprocessing pipeline, saves to the SQLite database, and persists to PDF certificates:

2. Process Definitions

- Process 1.0 (Validation): Sanitizes inputs (DTI, Age, Family Members).
- Process 2.0 (Inference): Applies scaling and caps outliers to match XGBoost/Logistic Regression formats.
- Process 3.0 (Explainability): Runs local surrogate evaluations once per transaction.
