

Code Layout, Readability & Reusability

1. Directory Structure Organization

To maintain clean code parameters, code blocks are organized under modular directory structures:

Folder	Description
/app/routes/	Flask route controllers for authentication and application logic
/app/services/	Core machine learning inference and explainability calculators
/app/database/	SQLite model logs, tables initialization, and users management
/app/utils/	Helper scripts, logger wrappers, and rate-limiting modules
/config/	Environment config objects (development, production, testing)
