

Functional Features

1. Secured Session Management

Authentication features include registration checks, timed token password recovery, script hash validations, and role-based route constraints:

- Administrator: Has full access to database logs and stats telemetry.
- Loan Officer: Authorized to view and search user predictions.
- Client User: Runs basic prediction forms and checks results.

2. Explainable AI Features

The LIME explanation engine computes local Ridge coefficients, detailing supporting attributes (e.g. high education, low DTI) and risk variables (e.g. bad credit, high debt) on the results page.
