

Scalability & Future Plan

1. Cloud Database Migration (PostgreSQL / Supabase)

To scale the platform beyond standard single-node serverless limits, future upgrades will replace local SQLite files with cloud-hosted PostgreSQL instances. This will enable concurrent user transactions and permanent data logs storage without size constraints.

2. Advanced ML Explainability

Integrate true SHAP (SHapley Additive exPlanations) or tree-explainer modules to increase the precision of the explainability pipeline for complex non-linear XGBoost classifiers.
